Nikhil Yadav

Hyderabad, India, +91 7062008878, work.nikhily@gmail.com , LinkedIn , website

PROFILE

Android engineer with 6+ years building consumer and enterprise mobile products, including 5+ apps launched on the Play Store and App Store totaling 10M+ downloads. Deep experience in Kotlin, Jetpack Compose, and Flutter, with production work across payments, offline first sync, and POS hardware integration. Domains span travel and ticketing, agritech, logistics, and waste management.

SKILLS

Kotlin	Coroutines/Flow	MVVM/Clean Architecture
Java	Jetpack/Room/WorkManager	Modularization/Gradle
Dart	Hilt/Koin	JUnit/Espresso/MockK
Jetpack Compose	Retrofit/Ktor	CI/CD (GitHub Actions)
Flutter	RxJava	Firebase/Crashlytics
Kotlin Multiplatform	Google Maps/HERE Maps	Git/GitHub/Bitbucket

EMPLOYMENT HISTORY

June 2024 — Present **Software Engineer II,** Ixigo (Bus Vertical) Hyderabad, India

- Launched four state transport bus pass products (TCNR, TAYL, PVSM, TTD) end to end, opening new revenue lines for the bus vertical.
- Significantly improved application quality and reliability, achieving an industry-leading 99.95% Crash-Free Rate through continuous performance monitoring and code optimization.
- Rebuilt the offline database sync engine using Kotlin Coroutines, eliminating data conflicts during intermittent connectivity at POS terminals.
- Built the TTD region ticketing solution from scratch, covering booking, payment, and offline ticket issuance.
- Engineered a Wi-Fi Direct P2P solution for offline data communication between POS devices, ensuring uninterrupted transactions.
- Integrated UPI and Card Payment Gateways to streamline checkout and improve customer convenience.
- Drove the application through VAPT security certification, remediating findings to meet compliance requirements for state transport clients.

Nov 2022 — May 2024 **Senior Android Engineer,** Carnot Technologies Pvt ltd Mumbai, India

- Introduced mock server driven development with Postman, unblocking Android delivery from backend timelines.
- Spearheaded the Flutter development, launching an app on the App Store within a month.
- Built a reusable UI component SDK adopted across the company's Android apps, cutting duplicate implementation work.
- Instrumented product analytics across key funnels, giving the team visibility into user engagement and drop off.
- Led the Krishe App's revamp, focusing on intuitive user interfaces and seamless functionality.
- Ensured top-notch security, achieving VAPT verification for our applications.
- Achieved a milestone of 1M+ downloads with 99% stability.
- Developed a comprehensive e-commerce platform for dealers, introducing features like inventory management and expense tracking, streamlining how dealers manage day to day operations.

Feb 2022 — Nov 2022 **Senior Android Engineer**, Ezyloads PVT LTD Bangalore, India

- Ran on site discovery with enterprise clients including Nippon and Easybox, translating operational pain points into product requirements.

- Stabilized legacy app builds and cleared the release blockers required to reach production readiness.
- Integrated Google Maps and HERE Maps APIs to improve live location tracking and navigation accuracy for fleet operations.
- Migrated the codebase to MVVM architecture, reducing regression defects and shortening feature turnaround.

Jan 2020 — Dec 2021 **Android Engineer**, WeVOIS Labs Pvt Ltd Jaipur, India

- Built Google Maps based field operations tooling for municipal waste collection fleets.
- Built an HRMS Android app from scratch covering attendance, leave management, task allocation, and productivity tracking.
- Collaborated closely with design and content teams with the social media strategies.
- Optimized route planning and data processing algorithms, improving daily collection route efficiency.

EDUCATION

June 2016 — April 2020	B Tech- Computer Science, Rajasthan Technical University, Kota, India
June 2017	C++ Certified
